

## FISHBONE SCULPTURES

The Fishbone Sculptures are created through the lost-wax casting process to create thin, skeletal forms that challenges existing assumptions around the heaviness of cast metals. The first pieces were small wall-hung objects created from hand carved thin wax elements. The objects are hung from the curved center portion allowing the majority of the sculpture to “float” away from the wall to create a certain weightless presence.

Made in Chicago

**Material:** Cast Bronze

**Dimensions:** shown above 80” x 40”

**Availability:** Unique

Custom dimensions & finishes are available upon consultation with the studio.
